EDUCATION

San Jose State University

Aug 2023 – Dec 2025

Bachelor of Science, Data Science

San Jose, CA

- Relevant Coursework: Data Structures and Algorithms, Advanced Python Programming, Data Visualization, Database Management Systems, R Programming, Machine Learning, Artificial Intelligence, Information Security, Probability and Statistics I & II
- Associations: Mathematics, Engineering, Science, Achievement (MESA), Stanford Science Groups (SSG), International Society of Pharmaceutical Engineers (ISPE), Society of Asian Scientists and Engineers (SASE)

EXPERIENCE

Full-Stack Software Engineering Intern

May – Aug 2025

VTN Manufacturing, Inc.

San Jose, CA

- Designed and developed full-stack performance analytics dashboard from ground up for CNC machining using **React**, **Node.js**, **Express**, and **PostgreSQL** to track runtime, downtime, defects, and performance from machine generated JSON files
- Built a data ingestion pipeline to migrate 5+ years of data to process machine-generated logs into structured records
- Reduced data inconsistency using the data ingestion pipeline, improving reporting accuracy and reducing revenue leaks by ~10%
- Decreased data reporting time by approximately 6 hours per week and improved visibility through real-time dashboard insights

PROJECTS

Tutor Me | tutor-me-tau.vercel.app

Apr 2026

- Shipped a browser-based social AI-powered classroom where learners move in a 3D space with others, talk to persona-based tutors that can be shared or duplicated, and participants can join the same live room using a room code
- Developed **React** + **Next.js** web app with **Three.js** for 3D interactions, and **VAPI** and **ElevenLabs** for the voice integration
- Built flows for the agent that uses reinforcement learning trained from user interaction with **Redis** for memory and caching
- Utilized **Tinyfish** to scrape data for our knowledge base and **Ghost** to store all our data connected to **Insforge** backend

AdLabs | adlabs.vercel.app

Apr 2026

- Placed as finalist at a GTM Hackathon creating an AI marketing platform for discovering short-form trends, turning them into on-brand scripts, with user-prompted AI-generated videos/images, and usage/cost analytics
- Utilized **Apify API** for scraping metadata from Tiktok, Instagram Reels, Youtube Shorts to get hashtags, views, etc. for trend analytics and cached the data into Supabase, reducing API run costs and improving load times to < 100 ms
- Implemented different models of **Seedance** and **Nanobanana** for media generation from user's choice of cost to performance
- Rebuilt project after hackathon to **React** + **Next.js** + **Auth.js** for session handling, routing, and auth for future user scalability, while keeping **Supabase** only for data which significantly reduced costs by ~90% and allowing migration to a VPS

Next Boba | nextboba.vercel.app

Jan – Mar 2026

- Developed a full-stack application using **Next.js**, **React**, and **Tailwind** with a **FastAPI** backend connected to **Supabase**
- Fine-tuned a sentiment analysis model on 6M+ Yelp reviews for bubble tea businesses to classify review polarity
- Designed **PostgreSQL** data model with sentiment scores, labels, and indexes which reduced load times to < 200 ms
- Deployed frontend on **Vercel** and backend on **Railway** for secure cross-origin API communication and consistent uptimes

Pokemon Moveset Predictor | pokemon-recommendation.vercel.app

Jan – May 2025

- Collaborated in a 2-person team to develop a **Dash** web app built on **Flask** and **React** deployed on **Google Cloud**
- Developed **Python** pipelines to scrape, clean, and process 100+ files from an online competitive Pokémon dataset
- Engineered analysis pipeline to improve prediction performance and deployed visualization to show possible outcomes and trends
- Developed a Random Forest model trained on large-scale datasets (10+ years of data) to recommend moves with ~70% accuracy

TECHNICAL SKILLS

Languages: Python, Java, R, SQL, TypeScript, JavaScript, HTML, CSS, Bash

Frameworks/Libraries: TensorFlow, PyTorch, React, Next.js, Node.js, Flask, Tailwind, Express, FastAPI, Scikit-learn

Database: MySQL, PostgreSQL

Tools/Platforms: Git, Google Cloud, Docker, Supabase, Clerk, Vite, Vercel, Railway, Render
